Aircraft Engine Notes

Air cooled aircraft engines depend on one of two different baffling systems for engine cooling. The most common of these is the one where metal baffles are attached to the engine forming the side walls and back wall creating a pressurized air chamber above the engine. The top of the cowling serves as the third side of the cooling chamber.

Another reality in the aircraft engine world is that the overwhelming majority of popular kits and plansbuilt aircraft use Rotax, Continental, or, especially, Lycoming engines. That's because they are known quantities in the aircraft maintenance and resale worlds. They're also well known to the airframe manufacturers, which is why they're normally the go-to choice on the factory's ships. Sure, it's ...
