The second heat transfer process is convection, or heat transfer due to a flowing fluid. The fluid can be a gas or a liquid; both have applications in aerospace technology. In convection heat transfer, the heat is moved through bulk transfer of a non-uniform temperature fluid.

### PART 3 INTRODUCTION TO ENGINEERING HEAT TRANSFER

The objective in all pattern designs is to maximize the heat transfer capacity while meeting the requirement for a low air pressure drop. Of course, efficient heat transfer through the coils results in higher energy efficiency for the system because the refrigerant cools down faster in the condenser and heats up faster in the evaporator.
