### Div Grad And Curl

The divergence of the curl of any vector field  $A$  is always zero:  $\{\displaystyle \nabla \cdot (\nabla \times \mathbf{A})=0\}$  This is a special case of the vanishing of the square of the exterior derivative in the De Rham chain complex. Divergence of gradient is Laplacian

### Vector Calculus: grad, div and curl

In vector calculus, div, grad and curl are standard differentiation operations on scalar or vector fields, resulting in a scalar or vector field. Scalar and Vector fields. A scalar field is one that has a single value associated with each point in the domain. A simple example is a temperature distribution; every point in the domain has a single value.

It turns out that the divergence and curl can also be expressed in terms of the symbol  $\nabla$ . This is done by thinking of  $\nabla$  as a vector in  $R^3$ , namely  $\nabla = \partial \partial x_i + \partial \partial y_j + \partial \partial z_k$ .
