Library Genesis is a search engine for free reading material, including ebooks, articles, magazines, and more. As of this writing, Library Genesis indexes close to 3 million ebooks and 60 million articles. It would take several lifetimes to consume everything on offer here.

Induced Innovation Theory And International

Induced innovation is a microeconomic hypothesis first proposed in 1932 by John Hicks in his work *The Theory of Wages*. He proposed that "a change in the relative prices of the factors of production is itself a spur to invention , and to invention of a particular kind—directed to economizing the use of a factor which has become relatively expensive."

Factor Prices and Technical Change: From Induced ...

While the induced technological change literature conventionally rests on Hicks (1932), and later evolutionary growth theorists (such as Romer, 1990), the dual processes of innovation and diffusion in environmental technologies rely principally on the Porter Hypothesis (PH), which proposes that environmental policy stringency can have positive innovation offsets in countries where that stringency is effective and occurs sooner than in other countries (Porter, 1991; Porter and Van der Linde ...

Induced Innovation in Agriculture | SpringerLink

The theory of induced innovation emphasizes that the differences in resource endowment and input prices across countries and over time can change the shape of the production function. International trade, however, can change resource allocation and input prices, and therefore affect input elasticities and productivity.
