Laura Phillips Last Modified Date: July 07, 2020 . Digital ink is a form of technology that allows handwriting and drawings to be added electronically to documents and be displayed on a computer monitor. Typically, a digital ink system utilizes a special digital pen or stylus to electronically record what is written onto digital paper — a pad designed specifically for that purpose.

The core of any inkjet printing system is the ink, which is essentially pigment suspended in a carrier liquid. The job of the ink is to deliver the pigment to the media and to bind it to the media's surface. The range of substrates that the ink will work with, ultimately determines the applications that a printing engine can handle.
