Micro-dissection of rat brain into various regions is extremely important for the study of different neurodegenerative diseases. This video demonstrates micro-dissection of four major brain regions include olfactory bulb, frontal cortex, striatum and hippocampus in fresh rat brain tissue. Useful tips for quick removal of respective regions to avoid RNA and protein degradation of the tissue are given.

Zivic Brain Slicer Matrices enable the precise sectioning / blocking of brains (rat brains, mouse brains, pig brains, gerbil brains, etc.). Each brain slicer matrix is designed with anatomically proportioned cavity dimensions and slice channels spaced at precise intervals, thereby allowing an investigator or research scientist to consistently slice coronal or sagittal sections of a brain.
